Necessary materials (not supplied)

- A needle.
- Round nose pliers.
- A piece of thick cardboard.
- Cutting pliers.

Advice

- Start by taking all the items out of the box to fully understand the contents and which cut-outs make up each butterfly stem.
- Handle cut-outs and stems with care.

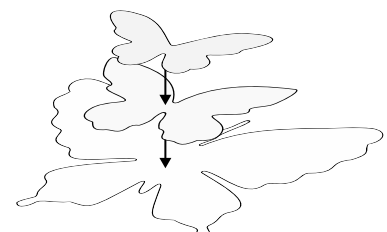

1

Using the stick, curl the butterfly wings to bring them to life. Gently stretch the wings by placing them between the stick and your thumb.

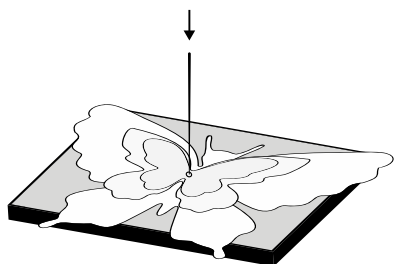

2

Place the 3 butterflies on top of each other in order of size.

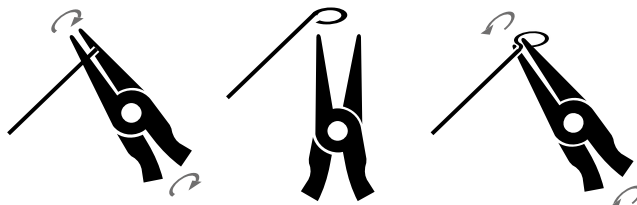

3

With the three cut-outs on top of each other place on the cardboard and make a hole in the center using the needle and set aside.

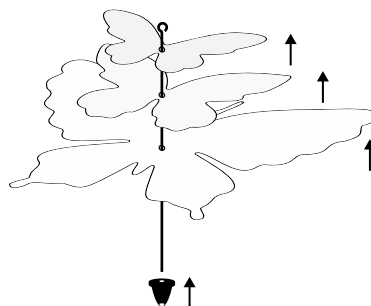

4

Form a loop at the end of the 3 rods.

5

Thread a rod through the hole and slide the butterflies (from smallest to largest) to the loop.
Do the same with the rubber stopper.
Repeat the exercise for the other two butterfly stems.

6

You have composed your bouquet of butterflies.
It's time to unscrew the cap from the small bottle and plant your pretty creation in it.

Additional Notes

- Using the stick, curve and bend the cutouts to bring them to life.
- Use wire cutters to adjust the height of your rods.
